

Creating energy efficiency and sustainable development

Culture change

How much is inefficiency costing your business? In today's increasingly competitive marketplace, it is important to consider not only how to generate sales, but also how to manage your costs.

Throughout the UK, simple measures that increase a company's profitability and best practice are being neglected. However, a culture change programme is one area in which you can generate increased profit and efficiency with a strong return on investment and it's all driven by your people.

Why a culture change programme?

- To involve your people and promote energy efficiency
- To reduce waste in your organisation and associated operational costs
- Promote Corporate Social Responsibility particularly related to the environment and your carbon footprint
- To identify, implement and maintain strategies to reduce energy use
- To support other energy efficiency actions e.g. investment in metering and monitoring, implementation of energy saving devices, such as variable speed drives

What are the benefits?

- Increased visibility and ownership of energy consumption
- Committed employees
- Elimination of waste in your business, improving profits
- Review of today with a vision of where to go
- A map for behavioural change for your organisation

Our offer

Schneider Electric has a flexible energy management programme to ensure that:

- Your energy change management programme is successful

Analysis

Our aim is to understand your needs and adapt the culture change programme to suit your organisation and existing level of expertise and knowledge. This includes:

- Energy efficiency behaviour survey and or an energy efficiency organisational evaluation
- Detailed report highlighting key areas of focus and recommended next steps

- Any technical or system solutions are exploited to their utmost potential

- You achieve a maximum return on investment

- Menu of options to allow you to tailor the recommendations to your particular needs including advice on the development and implementation of energy policies, training etc.

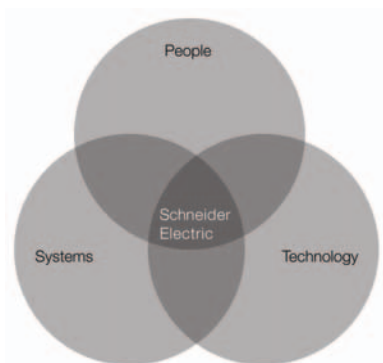

- Complete end to end service from initial consultation through to full implementation of the programme

Rewards

Implementation of a full culture change programme will ensure that you have the right strategies, policies, people and processes to help you to identify where you can save energy and more importantly maintain that energy saving.

Managing energy effectively is a complex task, involving understanding your current situation and your employee's key drivers, developing organisational and implementation plans, communication plans, training plans and reviewing progress. A strong campaign and continued action can yield savings of between 5-20% of your energy consumption.

Other related offers from Schneider Electric services and projects

For a truly holistic approach and to gain maximum results, it is important to consider the Energy matrix, people, systems and technology. Schneider Electric can support you in all of these areas, from initial auditing through to implementation of the total solution.
